

# TrezarTravels

## Introduction

TrezarTravels was conceived and developed to book hotels all over the world via an application that easily allows you to reserve and pay for hotels with TZC. You can book every +VIP hotel found on Expedia.com. TrezarTravels is not affiliated with Expedia, but is instead an external integration which allows you to book travel accommodations quickly and easily with TZC instead of fiat-currency.

## How does it work?

TrezarTravels is a fully customized Node.js application created by the Trezarcoin Development Team. The integration with Expedia.com is realized through a custom Slackbot, making it possible for everyone to book their favorite hotel in just a few simple steps. Right now it's only bookable via Slack, but other platforms are going to follow.

## Important!

- Check-in has to be at least **3** days from the actual booking date
- There is **NO REFUND** on your order
- **ONLY +VIP** Hotels from Expedia.com are bookable with this service
- Please make sure to enter valid booking information

## How to book a hotel?

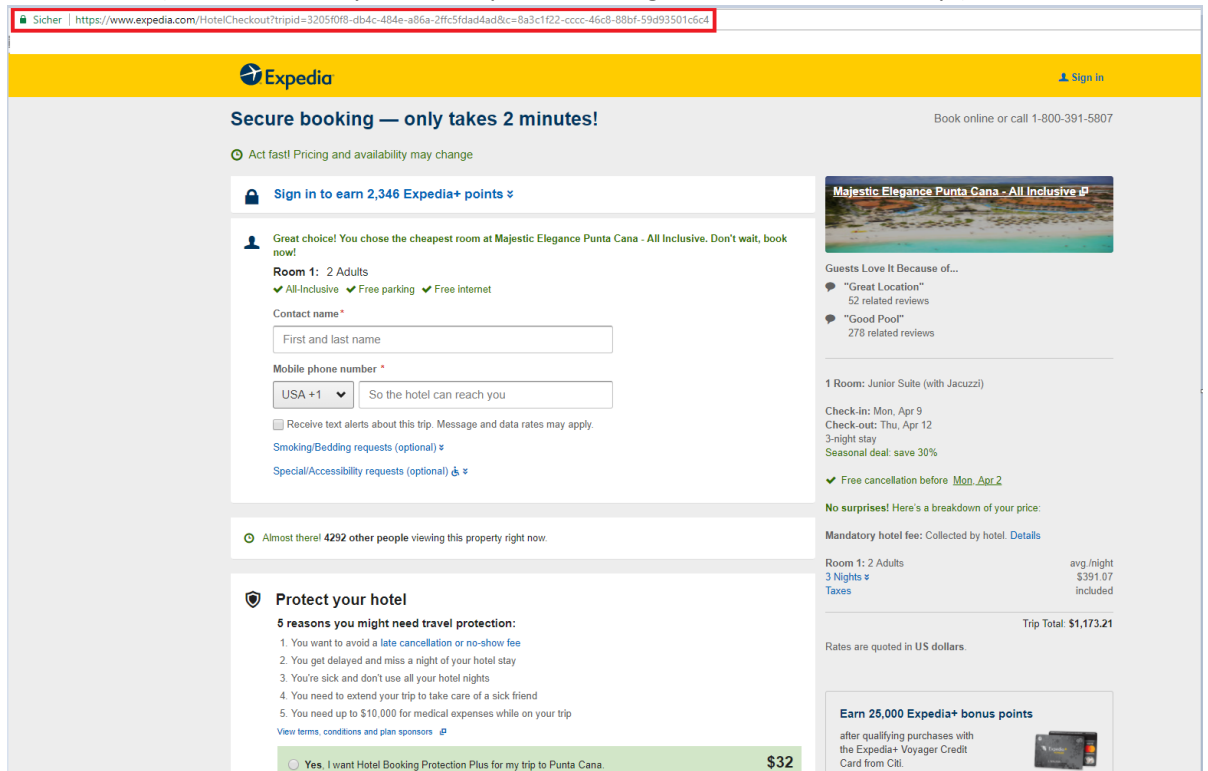

### Booking Steps:

- Join [Slack](#)
- Search for your favorite hotel on: <https://www.expedia.com/rewards/vipaccess>  
( Please consider that only +VIP hotels are available right now for this application )
- Set up your bookinginfo in Slack with the following simple slash command:

- Found your favorite +VIP hotel already? – Proceed to Checkout and paste the Checkout link into Slack with /book <Checkoutlink>

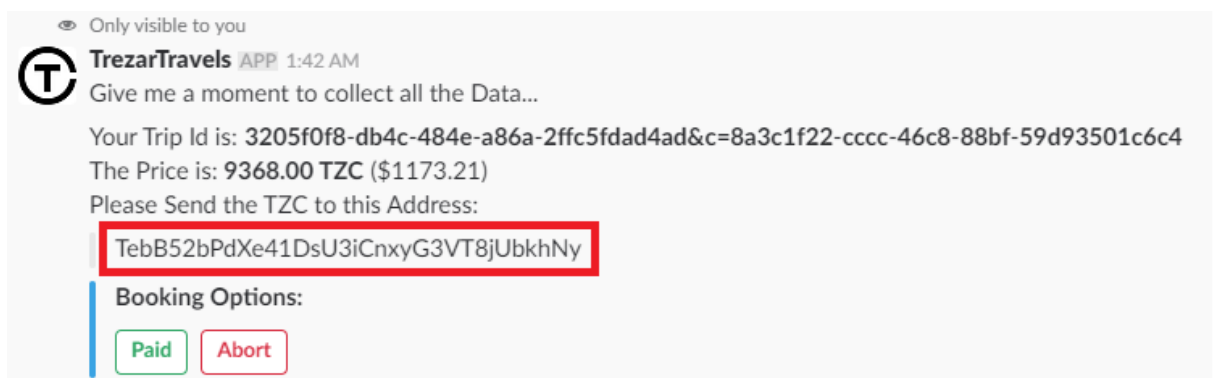

( This is how far you should proceed and grab the link from the top )

This is how it should look in Slack

Payment Step:

- The last step is making a TZC payment to the given TZC Address. If you have done that, click on paid and please wait for 3 confirmations. Afterwards you should get an „Order Complete“ confirmation message.

**Finished!** You should receive a confirmation via mail within 24 hrs from Expedia.com.
